SUMMARY

Data Engineer with 3+ years designing and modernizing production Lakehouse platforms on Azure Databricks across ingestion, PySpark transformation, Delta Lake modeling, orchestration, data quality, governance, CI/CD, and cost-performance optimization. Built a pipeline that turned a manual 6-hour process into a run of about 30 minutes at 20M records and kept it there as data grew from 20M to 500M+ records, improved query performance 65%, and cut Databricks DBU consumption 25%.

TECHNICAL SKILLS

Databricks & Lakehouse	Azure Databricks, PySpark, Spark SQL, Delta Lake, Unity Catalog, Liquid Clustering, Photon, Medallion Architecture, Databricks Workflows, Snowflake (Zero-Copy Cloning)
Azure Data Engineering	Azure Data Factory (ADF), ADLS Gen2, Azure DevOps, CI/CD, Docker, Azure Monitor, Job Clusters, Autoscaling
Programming & Querying	Python, SQL, Pandas, REST APIs, ETL/ELT, Incremental Loading, Metadata-Driven Pipelines
Modeling & Governance	Star Schema, Data Modeling, Data Quality, Data Governance, Audit Logging, Schema Evolution, Workflow Orchestration
BI & Visualization	Power BI, Tableau, Looker Studio

WORK EXPERIENCE

Data Engineer · ExaQube Technologies, Chennai · sole data engineer, 10-person startup **Jun 2026 - Present**

- Migrated 40+ production Python scripts from a legacy Ubuntu server to Databricks Workflows, replacing cron execution with dependency-aware orchestration, retries, alerting, and job clusters
- Reduced a thrice-daily pipeline's runtime from ~1 hr 50 min to ~30 min per run by resolving data skew and migrating to job compute clusters, cutting daily compute hours by ~70% and lowering DBU costs
- Built config-driven, Dockerized ingestion with idempotent checkpoints and schema evolution into Bronze Delta tables, allowing new sources to onboard without new pipeline code
- Tuned shuffle partitions, broadcast joins, adaptive query execution, file compaction, and clustering to stabilize heavier Spark workloads as data volume grew
- Automated per-branch Snowflake zero-copy dev clones for a client (Azure DevOps, month-end cleanup, 15+ engineers)

Data Engineer · Azimuth GRC, Gurgaon · led a 2-person data team, 30-person startup **May 2023 - May 2026**

- Led migration from legacy databases and SQL workflows to an Azure Databricks Lakehouse, redesigning pipelines in PySpark and Delta Lake; a Gold-layer Star Schema made queries 65% faster across 50M+ records
- Built the ADF and Databricks pipeline that turned a manual 6-hour process into a 30-minute run at 20M records, keeping it near 30 minutes past 500M+; weekly runs checked ~150,000 records x 85 tests
- Cut Databricks DBU consumption 25% through job clusters, autoscaling, Photon, and workload tuning; file compaction and Delta vacuuming reduced storage footprint 30%
- Automated ADF, Databricks, SQL, and Python workflows, eliminating 270+ hours of recurring manual work; metadata-driven ADF patterns reduced maintenance overhead 50%
- Implemented Unity Catalog access controls and audit logs, a PySpark Expectations framework for Bronze-to-Silver quality checks, and multi-stage Azure DevOps CI/CD

Data Analytics Engineer · PlanetSpark, Gurgaon · junior member of a 2-person data team, ~40-person startup **Nov 2022 - May 2023**

- Automated transformation and validation for 10K+ student records using Google Apps Script and Excel, cutting manual reporting cycles 40%
- Built 10+ engagement and retention dashboards; analysis informed product updates associated with 15% higher engagement and 20% better satisfaction metrics

CERTIFICATIONS

- Microsoft Fabric Data Engineer Associate (DP-700)
- Databricks Certified Data Engineer Professional
- Microsoft Azure Data Fundamentals (DP-900)

EDUCATION

B.Tech, Mechanical & Automation Engineering
Maharaja Agrasen Institute of Technology, Delhi · 2019-2023

Languages: English, Hindi
